

ANDRE JEWELERS, OK

"It's all about the art."

Located in Sapulpa, Oklahoma, Andre Jewelers has been a full design jewelry shop manufacturing and distributing to retail jewelers for 22 years. Sonny Rostami, designer of jewelry for 18 years at Andre Jewelers, says that "without 3DESIGN, it would have never been possible! All ideas are based on 3DESIGN software."

"Andre Jewelers is doing from point a-to-z, thanks to this incredible software called 3DESIGN" says Sonny with enthusiasm. **Thanks to Stuller who recommended 3DESIGN as "the best program on the market!"** Without any CAD knowledge, 3DESIGN is "very easy to create outstanding creations" affirm Sonny.

Sonny explains that being able to sketch directly into the sketch module has made a huge difference in the process time. Thanks to the library available in 3DESIGN, Sonny can save every single new design and sketch elements such as curves or lines with the integrated creations and 2D sketches databases. It can also help to build a design easily and quickly by selecting a shape from the library while creating your jewel. A large collection of pre-designed components is available, including rings, stones, settings and gems. 3DESIGN CAD includes the SWAROVSKI® Crystal Fashion Components library for colorful and unique jewels.

Sonny can create about **five (5) new models a day with 3DESIGN CAD** while his carving machine can produce about three (3) wax models. "3DESIGN CAD has every function necessary to be creative to achieve your dream." The parametric construction tree enables you to update your creation every time you change a detail. At any stage of the design, you can modify and review the changes

"3DESIGN is for people who want to (design) make jewelry, not for people who expect to turn on the computer and have it automatically done. **It's all about the art!**"
